5     Abstract Of The Disclosure

~~Optical fiber cable and process for the manufacture of an optical fiber cable~~

For an optical fiber cable with a cable core-(9), which contains at least one optical  
10     transmission element-(1, 10), and with a cable jacket-(7) surrounding the cable  
core, a plastic film (11) is applied over the cable core before extrusion of the cable  
jacket. The plastic film contains a material, which is also contained in the cable  
jacket. The cable jacket is extruded over the cable core and brought into contact  
15     with the plastic film in such a way, that it glues to the cable jacket during  
extrusion. In this way a cable construction for an optical fiber cable is created,  
which enables a comparatively small diameter of the cable and a comparatively  
cost-effective manufacture.
